Art Unit: 2673

DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 31,32 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamashita (U.S. Patent No. 6,313,844).

As per claim 31 Yamashita shows a memory array (element 303 In fig.1 and in Col.5 lines 31-34) formed of dynamic random access memory (In Fig.1 element 310); a pixel array(display 321 in Fig.1); and a refresh circuit(In fig.1 element 307) coupled to the memory array (element 303) and pixel array (via element 304 to display 321) and pixel array, the refresh circuit (element 307) adapted to refresh memory array and pixel array (In Col.5 lines 52-59 and In Col.6 lines 12-15).

Yamashita does not specifically shows a pixel array adapted to eliminate a need for periodic pixel refresh cycle. It would have been obvious to one of ordinary skill in the art at the time of the invention was made that having a refresh circuit does shortened the number of cycle to reduce the bandwidth and it is well known in the art that refresh circuit is instructed to refreshed in a predetermined period.

As per claim 32, Yamashita shows the pixel array (element 31) is coupled to the memory array (element 130 by a digital to analog converter (element 15).

Allowable Subject Matter

3. Claim 33 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art fails to teach or suggest the pixel array forms a reflective liquid crystal spatial modulator.

- 4. Claims 13,16,26,28-30 are allowed.
- 5. The prior art fails to teach or suggest a display having a liquid crystal over semiconductor substrate; a memory array; a pixel array including a plurality of electrodes to interact with a liquid crystal material over the pixel array and a refresh circuit coupled to memory array and the pixel array, the refresh circuit, the memory, and the pixel array formed on the same substrate, the refresh circuit adapted to feed data received from the memory array back to the memory array to refresh the memory array, the refresh circuit adapted to refresh the pixel array as claimed in claim 13,26.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nitin Patel whose telephone number is 703-308-7024. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin H Shalwala can be reached on 703-305-4938. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
